

# Roller Barrier - the Non Aggressive Anti Climb System of Choice

- Effective and attractive
- Easy to install / choice of fixing brackets, etc.
- No risk of "Impalement" (or subsequent costly "No-Win / No Fee" litigation cases to fight)
- Unbreakable / Fire Retardant Roller Cups
- Available in Black or Green finish from stock
- Manufactured from recycled polycarbonate (helping to meet recycling targets)

These are just a few of the reasons that Roller Barrier is now being specified as the Anti Climb system of choice for use at; schools, mental care homes, parks and public areas, public and historic buildings, trackside along our railway network and much more. ...here are some examples of typical installations;

The 3 metre high security fence at this new school, proved more of a challenge to local youths than a deterrent!

Retro-fitting Roller Barrier above the vulnerable gates has proven successful in stopping vandals and unauthorised intruders from entering the school grounds after normal opening hours and a Phase II installation is now planned to offer protection for other vulnerable areas at the site.

Flat Roofs seem to be a magnet for children as well as vandals, burglars and other undesirables.

This typical Roller Barrier installation offers a simple way to stop unauthorised access, and as it can be Top or Face Fixed, it's easy to install it in a way that avoids damage the delicate roof membrane which could lead to a leaky roof!

Installed at key points around a Young Offenders institution, Roller Barrier is shown here installed to prevent the inmates from gaining access to low roofs.

The system is also used to prevent inmates at care homes for the mentally handicapped, etc. from climbing onto roofs or scaling fences, where the use of a more aggressive or spiked anti climb barrier would present a serious risk of injury.

Used to deter unauthorised access to railway tracks, Roller Barrier is shown here in use at a gated crossing.

The specification from the rail operator required the system to be green colour matched to the existing palisade fencing.

The versatile Roller Barrier system is shown here installed to follow the unusual contoured roofline of a London community centre,

...the roof of which had previously been plagued by vandalism and damage from climbing children and youths, is now a protected area.

A double row of Roller Barrier was specified and installed above the gates and walls of this adult learning centre which was suffering serious vandalism from intruders during non operational hours.

As with many other sites, the success of the initial installation has led to the specification of a further phase of installations to protect other vulnerable areas at the complex.

Shown here installed to prevent youths and intruders from using air conditioning vent cages as a climbing frame to gain access to the roof area.

Blending in with parkland surroundings, the green Roller Barrier is an easy retro-fit to existing walls or fences.

Available in Black or Green from stock, Roller Barrier cups can also be manufactured in a wide range of other standard RAL colours.
