

Example of Keymanager User ID Chart

Keymanager Access Pegs are colour coded and numbered. Typically within an organisation, the colours are used to represent different parts of the business (i.e. job function or activity, building or physical area, type of vehicle, etc.)

Access Pegs issued to a user, are logged (colour and number) on a chart such as the example below, so that the user can be instantly identified by their Access Peg, when keys have been removed from the board.

KEYMANAGER ACCESS USER CHART
