Vidilanz™

Intelligent video security system

The future of security is here: the Vidilanz™ Intelligent Video Security System.

Compact and lightweight, the Vidilanz™ provides top-level security anywhere, anytime.

Perfect for the home, office and small business. Use Vidilanz™ to monitor...

How Vidilanz™ works

Inside the Vidilanz™ is a colour CMOS digital camera, motion detector and remote control receiver. The unit is controlled by a powerful 32 bit RISC video processing engine.

When the unit detects motion, it automatically begins recording a series of still images and saves them to a memory card.

The images saved to the Vidilanz's memory card can then be downloaded to a computer or PDA and viewed. Vidilanz™ can be operated by remote control.

The future of security is in your hands... with Vidilanz™.

Whether you're security conscious or just curious about what happens on your property, Vidilanz™ fulfills all your needs.

Even before motion is detected, Vidilanz™ is hard at work recording 'pre-trigger' images at programmed intervals. Then, when the motion sensor is triggered, Vidilanz™ records a series of full colour images in rapid succession until the movement stops.

Users have full control over the quality, timing and the number of images captured, which are optimised and stored as JPEG images on a removable memory card. Each image contains time/date stamping, plus a unique tamper proof digital signature for verification. Vidilanz™ comes with one 32MB memory card which holds up to 800 VGA images (1GB card holds up to 22,000 VGA images!)

Vidilanz™ can also work as part of an existing security monitoring system, activating alarms while still capturing photographic evidence of an intruder.

When you can't be vigilant, get Vidilanz™ to keep an eye out for you.

Vidilanz™ features + benefits:

- **Easy to install and use**
- **The most economical colour digital camera system available**
- **Independent operation or compatible with existing systems**
- **Infrared motion detector**
- **Rapid image capture and compression**
- **Automatic setup of camera from memory card**
- **Complete user control over image size/resolution, frame timing sequence, and number of images captured**
- **Pre-trigger capture (PTC)**
- **External trigger** (such as cash drawer or door)
- Accepts **MMC™ or SD™** cards
- **32MB card** holds up to **2,200 QVGA images**; **1GB card** holds up to **65,000 QVGA images**
- Optional **USB MMC™/ SD™ Reader**
- Each image **stamped with time/date and digital signature**
- **Remote control** to arm, disarm and take photo
- Internal **backup battery** powers camera for up to **2 weeks**
- Optional **internal high capacity battery** powers camera up to **9 weeks**

Technical Specifications

Image Type	24bit Colour, JPEG compressed VGA (640x480pixels), QVGA (320x240)	External Power Supply	9V DC to 13.8V DC
Camera Angle	70 degrees horizontal 40 degrees vertical	Backup Battery	Lithium Ion, 3.7V 600mAh
Image Sensor Sensitivity	Colour: 1.12 V/Lux-Sec B & W: 3.0 V/Lux-Sec	High Capacity Battery	Lithium Ion, 3.7V 3000mAh
Motion Detector Range	0-5m (minimum), 0-12m (typical) 100° horizontal, 82° vertical	Photo-Relay Specifications	280 VDC, 100mA
Approximate Image Capacity	32MB MMC VGA: 800 images QVGA: 2,200 images	Power Consumption	Standby: 1.9mA Running: 95mA Charging: 200mA
	1GB MMC 22,000 images 65,000 images	Case Dimensions	116 x 67 x 55 mm
		Weight	125g (with backup battery) 163g (including packaging)
		Operating temperature	0°C to 50°C

Australian designed & manufactured
