

## LIMPET ALARM a stand alone equipment alarm

### Dual sensor alarm

Stop unauthorised movement or tampering with your equipment (PC/MAC computers, printers, etc). Approximately the size of a large 'Mars bar' this compact steel encased equipment alarm can be internally mounted or attached externally. Incorporating dual tilt switches (adjustable for sensitivity) and an optional anti tamper switch, the unit can detect unauthorised movement or any attempt to open the casing of the protected equipment. The alarm siren is armed/disarmed by removing/inserting the special electronic key-switch into the switch socket. A key-switch extension cable and expansion slot mounting bracket ensures easy access to the socket when the alarm is installed inside of a PC or MAC computer and is available as an option.

### Movement sensor alarm

Designed to bond to the external surface of equipment casings, this budget priced alarm is ideal for use with PCs and ancilliary equipment, projectors, etc.

Operating from a standard PP3 battery, the unit should offer many months of normal operation between battery changes.

Armed and disarmed via the keyswitch, the alarm bonds to the receiving surface with the special VHB (very high bond) tape pre applied to the rear of the unit. Once armed, the unit is triggered by any unauthorised movement. A simple yet effective alarm.
