

Parking posts, bollards & cones

Car Stop parking posts

The Car-Stop 'A' post offers a much more robust barrier than conventional fold down posts. Typically installed in line with the length of the vehicle, it requires only shallow excavation and when in the down position the surface is flush with the ground. Galvanised and paint finished, the Car-Stop features an integral 10 pin lock with special dust cover and offers a convenient alternative to lift out posts on garage forecourts, etc.

TM CARSTP	Car Stop folding A post	H = 575mm tray 90 H x 225 W x 855 L

Parking reservation posts

A convenient method of preventing unauthorised use of your parking place. Conventional fold down posts as shown are surface mounted and can be bolted into concrete or tarmac surfaces.

prod ref	description	approx dimensions
TM FPSTP	Folding post (padlock model)	H = 760mm dia = 63mm
TM FPSTK	Folding post (key lock model)	H = 760mm dia = 63mm
TM FPFXC	Folding post fixings (concrete)	M12 anchor bolts (x 3)
TM FPFXA	Folding post fixings (tarmac)	M12 rubber sleeved bolts (x 3)
TM FPPL40	Marine quality outdoor padlock	40mm vinyl sheathed

Lift out posts

(Concrete in ground sockets range in depth from 140 – 200mm)

Prevent unauthorised removal of your vehicle or use of your parking place. Box section models are available in three sizes, galvanised finish (powder paint – optional extra). The Deco Post (far right) offers an ideal alternative to cast iron posts which can splinter on impact (e.g. when hit by a vehicle) potentially causing danger from flying fragments. It is finished with an attractive thermo plastic moulding which is bonded to a robust steel core.

prod ref	description	approx sizes (height above ground / diam.)
TM LP01/60	Lift out box Sect. post (small)	690mm H box section 60mm
TM LP01/80	Lift out box sect. post (medium)	965mm H box section 80mm
TM LP01/100	Lift out box sect. post (large)	1100mm H box section 100mm
TM LPDECO	Lift out deco post	725mm H steel core 95mm

(the above are post and socket sets, posts and sockets also available separately)

TM FPPL40	Marine quality outdoor padlock	40mm vinyl sheathed

Telescopic & anti-ram posts

Increasingly Insurers are looking to the use of anti ram posts, to protect roller shutter doors and other vulnerable areas. Our key locking telescopic Anti Ram post (not illustrated) is manufactured around a robust RSJ which fits flush to the ground when not in use and is designed so if damaged, can be removed without excavation.

Our telescopic Mole Post (shown right) is manufactured from 100mm box section.

prod ref	description	approx dimensions
TM ARPOST	Anti Ram post	o/a length 950mm above ground 720mm
TM MOLPST	Mole Post (padlockable)	o/a length 765mm
TM MOLPSTIN	Mole Post (integral lock)	above ground 610mm

Traffic cones

Traffic cones are available in a range of styles and sizes. From single part (sand weighted) units to two part self weighted units.

Traffic flow control

Speedbumps

Speed bumps are designed to slow traffic down. Ideal for use in site entrances and heavily pedestrianised areas.

Standard traffic flow plates

Traffic flow plates are designed to ensure vehicles travel in one direction only. Keeps traffic flowing smoothly and prevents accidents by preventing wrong way access to one way streets or site entrances.

HGV traffic flow system

Jeeps, 4x4s and HGVs require a heavier duty solution than the standard traffic flow plate, our special 'Alligator Teeth' system provides the ideal solution. The units are designed to take unlimited axel weight, whilst special rubber blocks ensure silent operation. Robust construction and easy maintenance are just two of the reasons that they come with a four year mechanical warranty.

Dealing with vehicles causing an obstruction

Acute time pressure (trying to make it to a meeting on time), lack of parking spaces, or simply driver inconsideration of others, often leads to vehicles being abandoned in the most inconvenient places. Such inconsideration can of course be punished by plastering security labels across the vehicles windscreen, wheel clamping, or a host of other measures, however when the situation turns into a 'crisis' e.g. emergency vehicles cannot gain access to a life threatening incident, other measures are needed. The Gojak vehicle skate system is an indispensable tool for the busy Security or Site Manager, offering a simple means of moving vehicles to an alternative location, without damage and within a matter of minutes.

A Gojak mobile wheel lifter is applied to each of the vehicles wheels, and used to crank the wheels clear of the ground. The vehicle can then be safely pushed to a new position where it can be released again (and where it could of course still be clamped for subsequent action) without damage.

With little effort from the operator, Gojak's twin rollers gently lift the tyre in one smooth gliding action. 360 degree castors allow the vehicle to be moved in any direction, without risk or damage.

EXISTING GOJAK USERS INCLUDE

- Fire brigades
- Police forces
- Public and private car park operators
- Universities
- Hospitals
- Utilities
- Road surfacing & construction companies

Wheel clamps

Wheel clamping can be an effective deterrent against unauthorised or inconsiderate parking. It can also be used to generate a financial contribution toward the cost of vehicle / site management . BUT REMEMBER CLAMPING SYSTEMS NEED TO BE PROPERLY MANAGED AND WELL PUBLICISED WITH CLEARLY VISIBLE SIGNS.

DELTA MAGNUM, HGV wheel clamp

The practical answer to securing larger commercial vehicles, the HGV Clamp fits virtually all commercial vehicles. The robust steel delta plate is welded to a tubular steel frame for convenient handling. The whole unit is secured to the wheel by means of a heavy duty welded link security chain (chain links manufactured from 10mm diameter steel) locked off with a padlock.

- suitable for one man operation
- robust construction
- used for both security and parking enforcement
- visual and practical deterrent

DELTA standard wheel clamp

The practical answer to securing cars, vans and commercial vehicles up to 7.5 tons. The robust steel delta plate is re-inforced with a hardened steel plate and support frame and the unit incorporates a carry handle slot for convenient handling. The whole unit is secured to the wheel by means of a heavy duty welded link security chain (chain links manufactured from 10mm diameter steel) and locked off with a super heavy duty (CEN 4) Sold Secure padlock.

Competitive price, robust versatile design, effective operation and the simplicity and speed with which this clamp can be applied makes it a favourite with enforcement companies and other experts.

- quick and easy installation
- suitable for one man operation
- robust construction
- used for both security and parking enforcement
- visual and practical deterrent

Securaclamp

The Securaclamp is a robustly constructed unit which can be applied quickly, easily and without damage to the vehicle to which it is applied. A robust shackless padlock is ideal to lock the clamp on. The general ease of use and speed of installation of this unit makes it the ideal choice for situations where operatives may be confronted by the vehicle owner during installation. Suitable for use with most cars from Mini's to Mercedes, the SECURACLAMP accommodates tyre widths from 145 to 205 (or larger with a simple adaptation). Also suitable for use on caravans, horse trailers, and items of plant such as compressors and generators.

Boundary fencing, cycle hoops & barriers

We offer a range of perimeter or boundary fencing, cycle hoops and temporary / crowd control barriers.

Fixings

We offer a range of heavy duty fixings for securing posts into concrete or asphalt.
