Overview

The Garrett Walkthrough Metal Detector Operational Test Piece (OTP) is specifically designed to simulate the size, shape, and composition of a knife.

It is used for daily testing and verification of the calibration settings of Walkthrough Metal Detectors, meeting the knife test requirements.

When to test?

Insight Security can help you select the right test piece for your specific needs. We also offer support in creating best-practice policies and provide training for both testing and operating your security screening equipment.

When to test?

Operators should consult the manufacturer's guidelines for recommended testing intervals.

At a minimum, Westminster advises testing walkthrough metal detectors as follows: every 24 hours, with daily tests conducted at the start of each shift and during shift changes. Additional tests should be performed whenever the systems are powered on/off, relocated, or serviced.
