

Window Security Bars so simple - anyone can fit them or your money back!

You're just 3 easy steps away from having a secure window

Step 1. What type of fixing do you prefer

There're two types of security window bars to choose from;

“**Reveal Fix**” Window Bars - fit like this

“**Face Fix**” Window Bars - fit like this

Step 2. How many window bars do you need

First decide on what “Bar Centres” you need - that's simply the distance from the centre of one bar, to the centre of the bar next to it;

100mm (4") centres is recommended for Child Safety Applications

150mm (6") bar centres for Security Applications.

Now, using a tape measure, measure from the centre of your window out to the right ...at every 100mm point you'll need a bar (if it's a Child Safety Application), or at every 150mm for a security application. (Remember: the distance between the edge of the window and the centre of the bar closest to it should'nt be any greater than your chosen bar centres).

...so say for example you've counted 4 bars to the right, you're going to need another 4 bars for the left, plus one for the middle ...that's 9 bars. See how easy it is!

Step 3. How tall do your window bars need to be?

There are 5 AdaptaBar security bar sizes to choose from - each features a 12" (300mm) telescopic adjustment;

Height range covered

Bar 18	457mm - 762mm	(18" - 30")
Bar 30	762mm - 1067mm	(30" - 42")
Bar 42	1067mm - 1372mm	(42" - 54")
Bar 54	1372mm - 1676mm	(54" - 66")
Bar 67	1702mm - 2007mm	(67" - 79")

Optional Extras;

If you really want to maximise your security, add a set of these low cost Lateral Spacers, which are designed to stop your bars being prised apart by really determined burglars. (Remember: you'll need one less lateral spacer than the total number of window bars for the window)

Using anti tamper, one way security screws to fix your security bars in place will also add to your overall level of security. - See the special “**Security Fixing Pack 50**”
