

# Robust and effective anti-climb barrier for your walls, gates, fences, flat roofs, etc

Attractive appearance, effective performance and easy installation, combined with low cost, makes Razor Channel a favourite with end users and installers.

The choice of “U” or “W” profiles, means that there is a practical anti-climb deterrent for your walls, gates, fences, flat roofs, etc. Both profiles can be top fixed, whilst the “W” profile channel also allows face fixing, making it particularly suitable for use with flat roofs.

Robustly manufactured from 1.6mm steel sheet, Razor Channel is pre-drilled with fixing holes making it easy to install, whilst the galvanised finish ensures maintenance free weather protection (also available as an option with durable paint finish in a choice of colours).

## Installation Guidelines;

As a potential hazard to intruders, this product should be installed to comply with the Occupiers Liability Act 1984, and we strongly advise the use of a professional installer. In all cases, clearly visible warning signs must be displayed at intervals along its installed length (a maximum of 3 metres between signs is recommended) and signs should also be visible at each approach point.

As a general guide, it is recommended that the product is not installed at a height of less than 2.2 metres from the ground, and some education authorities have recommended a minimum installed height of 2.4 metres from the ground, where the product is installed on school premises.

Supplied in convenient 1.8 metre lengths, Razor Channel is quick and easy to install.
