

# It may look attractive, but RazorSpike 11 is also a very effective anti climb product

Born out of South Africa, RazorSpike 11 has proven its credentials worldwide. The combination of its attractive appearance combined with formidable performance has made it a favourite with embassies and listed buildings as well as general commercial users.

The three dimensional design of RazorSpike provides greater volume, superior strength and makes it an excellent physical and psychological barrier.

The manufacturing process guarantees consistently sharp points, while heavy ribbing provides excellent strength.

The versatility of RazorSpike makes it the ideal security barrier for flat roofs, fences, gates and walls.

Pre-drilled with fixing holes through the base of the product, RazorSpike is easy to install, and its galvanised steel construction means that it is maintenance free.

Whilst most users find that the galvanised finish blends easily with most buildings and environments, if required, the product can also be supplied in a range of durable paint finishes.

## Installation Guidelines;

As a potential hazard to intruders, this product should be installed to comply with the Occupiers Liability Act 1984, and we strongly advise the use of a professional installer. In all cases, clearly visible warning signs must be displayed at intervals along its installed length (a maximum of 3 metres between signs is recommended) and signs should also be visible at each approach point.

As a general guide, it is recommended that the product is not installed at a height of less than 2.2 metres from the ground, and some education authorities have recommended a minimum installed height of 2.4 metres from the ground, where the product is installed on school premises.
